# WELCOME MESSAGE

We are delighted to invite you to the 2<sup>nd</sup> International Congress of Micro-Immunotherapy (ICoMI), which will take place online on June 2-4, 2022.

ICoMI is an international platform for exchange between health professionals and researchers on Immunomodulation. This 2022 meeting will cover the core fields of Immunology & Metabolism, two challenging areas that are already shaping the roadmap towards precision medicine.

Metabolism is a fundamental requirement underlying immune cell function in health and disease. Immunometabolism uncovers astonishing understandings and sheds light on new targets to modulate the immune response.

We have just finished the programme, and many exciting lectures are awaiting you. Among the topics covered are: the power of cytokines to modulate metabolic disorders even at low doses, the protective effect of NADH on mitochondrial dysfunction in diabetes, and the role of dietary metabolic interventions in resolving excessive inflammatory conditions and many other inspiring presentations.

We look forward to welcoming you at the congress!
